ICY BOX
IB-869a
USB 3.0 multi card reader

Reads more cards than any boy scout

The ICY BOX IB-869a is a real all-rounder when it comes to reading memory cards. Independent of the operating system, it can be connected via USB and then offers a total of six different slots for storage media. Among others, xD, SD, SDHC, SDXC, MMC, RS MMC, microSD, CFI, CFII, MD, MS, MS Pro, MS Pro Duo and M2 cards can be read.

Connect and go full speed

The USB 3.0 connection enables a higher data throughput than USB 2.0, so even extensive image collections and long videos can be copied in the shortest time. If the modern connection is not available, that is not a problem either. Because USB is downward compatible.

Use in unusual places

A special bonus is the two attached magnetic strips on the underside, which allow the card reader to adhere to all magnetic surfaces, offering plenty of flexibility in placement.
